

# SOUNDENGG CONSOLE - DEVELOPER MIGRATION & BACKUP GUIDE

Generated on: 2026-07-27

This document outlines all critical backup and restoration steps required before fully resetting your Mac laptop, ensuring you do not lose project code, signing keys, or developer configurations.

## 1. CRITICAL ASSET BACKUPS (DO NOT WIPE WITHOUT THESE)

### [A] ANDROID KEYSTORE FILE (CRITICAL)

- Path: android/app/upload-keystore.jks
- Why: This file is ignored by Git (\*.jks is in .gitignore). If lost, Google Play will reject all future updates forever because signatures must match.
- Action: Copy 'upload-keystore.jks' to a secure USB drive or Google Drive.

### [B] PUSH LOCAL GIT COMMITS

- Status: Your local Git branch is 10 commits ahead of remote main.
- Action: Run the following command to push all work to GitHub:  
\$ git push origin main  
(Alternatively, backup the entire 'soundengg-website' folder to USB/Cloud).

### [C] EXPORT IOS SIGNING KEYCHAIN CERTIFICATES

- Why: Contains the private keys signing the iOS App Store build.
- Action:
  1. Open Keychain Access on your Mac.
  2. Search for "Developer" and "Distribution" certificates.
  3. Right-click, select Export, and save them as .p12 files.

## 2. SYSTEM CONFIGURATIONS & AI MEMORY BACKUP

Run this terminal command to automatically package your dev lists & AI memory:

```
$ mkdir -p ~/Desktop/Dev_Essentials_Backup
$ cp -r ~/.gemini ~/Desktop/Dev_Essentials_Backup/Gemini_Settings
$ brew bundle dump --file=~/Desktop/Dev_Essentials_Backup/Brewfile
$ npm list -g --depth=0 > ~/Desktop/Dev_Essentials_Backup/npm_global_packages.txt
$ code --list-extensions > ~/Desktop/Dev_Essentials_Backup/vscode_extensions.txt
```

Folder to backup: ~/Desktop/Dev\_Essentials\_Backup

## 3. PASSWORDS & ACCESS TOKENS BACKUP

### [A] SSH KEYS (GITHUB/SERVERS ACCESS)

- Action: Run this command to backup all your SSH keys:  
\$ cp -r ~/.ssh ~/Desktop/SSH\_Backup

### [B] SAFARI PASSWORDS

- Action: Already saved inside the Keychain backup!

### [C] CHROME PASSWORDS

- Action: Open Chrome -> chrome://password-manager/settings -> click Export.

---

#### 4. HOW TO RESTORE EVERYTHING ON YOUR NEW/RESET MAC

---

1. RESTORE AI ASSISTANT MEMORY:  
\$ cp -r /path/to/backup/Gemini\_Settings ~/.gemini
2. RESTORE HOMEBREW PACKAGES:  
\$ brew bundle --file=/path/to/backup/Brewfile
3. RESTORE SSH KEYS:  
\$ cp -r /path/to/backup/SSH\_Backup ~/.ssh  
\$ chmod 700 ~/.ssh && chmod 600 ~/.ssh/\*
4. RESTORE KEYCHAIN CERTIFICATES:  
Double-click the exported .p12 files and enter their passwords.
5. RESTORE VS CODE EXTENSIONS:  
\$ xargs -n 1 code --install-extension < /path/to/backup/vscode\_extensions.txt
6. RESTORE ANDROID KEYSTORE:  
Copy 'upload-keystore.jks' back to the 'android/app/' directory.
